

An Employee Requests Software Installation through the Service Catalog

This journey map describes the end-to-end experience of an employee requesting licensed software installation through ServiceNow Service Catalog.

servicenow

STEPS	1 Need Software 	2 Open Service Catalog 	3 Select Software Installation Request 	4 Enter Request Details 	5 Submit Request 	6 Manager Approval 	7 IT Fulfillment (Installation) 	8 Track Request Status 	9 Software Installed 	10 Request Completed 
 What the Employee Experiences	Employee realizes that specific software is required for work.	Employee accesses ServiceNow and looks for the software installation service.	Employee selects the appropriate software installation request item.	Employee provides information about the required software.	Employee reviews the information and submits the request.	Employee waits while the request is reviewed by the manager.	Employee waits while IT installs the requested software.	Employee checks the status of the request.	Employee receives the software after installation is completed.	Employee's request is completed successfully.
 Interactions (What they do)	Identifies the software requirement.	Opens Service Catalog and searches for the software request.	Opens the software installation request form.	Enters software name, version, justification and other details.	Clicks on Submit / Order Now.	Manager reviews the request and approves or rejects it.	IT staff reviews the request and performs the installation.	Checks request status in ServiceNow and receives updates.	Confirms software is installed and working.	Acknowledges completion and closes the request.

 People (Who they see or talk to)	Employee	Employee	Employee	Employee	Employee	Manager (Approver)	IT Support Employee	Employee, IT Support	IT Support, Employee	Employee, IT Support
 Positive Moments	Employee knows what software is needed.	Centralized location makes the request easy to find.	Structured form provides a standard process.	All required information is captured in one place.	Request is recorded with a unique request number.	Automated approval reduces manual communication.	IT receives clear information to fulfill the request.	Centralized tracking provides visibility.	Employee can start using the software.	Clear end to the process with audit trail.
 Negative Moments	Employee may not know the correct request process.	Difficulty finding the correct catalog item.	Too many or unclear fields may cause confusion.	Missing or incorrect information may delay processing.	Employee may not be sure if request was submitted.	Waiting for approval can delay software access.	Installation issues or license unavailability may delay.	Lack of status updates causes uncertainty.	Installation failure may require additional help.	Employee may not know what to do if issue occurs.
 Areas of Opportunity	Provide clear instructions and guidelines.	Use clear catalog item name and description.	Keep only necessary fields with clear instructions.	Add mandatory fields, validation and helpful instructions.	Show confirmation message and request number immediately.	Send automatic approval notifications and reminders.	Automate task assignment and provide clear task details.	Provide automatic status notifications at key stages.	Add completion confirmation and troubleshooting information.	Provide support information after completion.
 Goals & Motivations (Help me...)	Help me get the software I need to perform my work.	Help me quickly find the correct software request option.	Help me submit my software request without confusion.	Help me provide all information needed for approval.	Help me know that my request has been submitted successfully.	Help me get approval quickly and transparently.	Help me get the approved software installed correctly.	Help me know what is happening with my request.	Help me start using the software as soon as possible.	Help me confirm that my software request is completely resolved.
